

Jest you hold on... Lemme git hold of mah fancy wood mouse on mah newfangled 'puter and I'll draw you up somethin' real purty.

5 out of 5 backwood hick artists don't use a Wacom® Cintiq™. Do you really want to be in the same category as them?

Stop acting like a bumpkin. Buy a Wacom[®] Cintiq[™] for all your "purty" pictures.

Cintiq 15x - 15" Screen: \$1,899 MSRP

Cintiq 18sx - 18.1" Screen: \$3,499 MSRP

Both the 18sx & 15x have very adjustable stands that allow ergonomic drawing angles

WACOM Cintiq[™]

Backwoods, stump-jumping hicks are still using mice to design and draw "purty" pictures on their "puters". Unless you use the Wacom Cintiq, you have a lot of similarities to the backwoods hick folks. We know differently. Unlike the hicks, you yearn for a better way to interact with your computer.

Drawing with a mouse is awkward and very hard to master. The new Wacom Cintiq gives you power and flexibility you never dreamed of with a mouse. And, if you have used a Wacom pressure sensitive drawing pad, you know the control it gives you, but the difference between the Cintiq and other pads is astronomical. Mice and the non-LCD pressure sensitive pads don't give you the unified feeling that you get with the Cintiq.

The screen clarity, pad/stylus sensitivity and connectivity are to die for. After you get your hands on the Cintiq pressure sensitive drawing pad, you'll wonder how you ever got along without one. You won't be compared to a bumpkin anymore.

The only other tool that is even comparable to the flexibility the Cintiq gives you is your brain and a pencil. But, your brain and a pencil don't give you the benefits of customizable stylus settings, multiple undo's, millions of custom brushes, or 512 levels of pressure sensitivity (just to name a few). Drawing with a mouse on a computer is hard; it's great for laying out pages, specifying type and word processing, etc., but getting a natural feeling by drawing with a computer mouse is very tough. The Wacom Cintiq gives you the natural feeling that you get with pencil-on-paper, plus features you could only dream of when using the low-tech option. Have you ever tried to "Undo" on a sheet of paper?

The Cintiq allows you to look at the pad and see what is being drawn directly under your stylus. It gives you the eye-hand correlation that you get with drawing on paper. The Wacom Cintiq virtually eliminates the barrier between the user and the computer.

If you want this level of integration with your computer, get a Wacom Cintiq. You have a choice between the 15" and 18.1" versions. Don't give connectivity a second thought. It's Windows & Macintosh compatible out of the box and you can use it with virtually any computer system.

The new Cintiq will change the way you draw and paint. No one will be able to accuse you of being a backwoods bumpkin anymore. That drool you feel on your chin isn't from tobacco juice, it's because you're salivating for a Cintiq.

"If'n I had me one of them Wacom Cintiqs, I could draw me in some teef and one a them fancy mustaches. I'd be so purty, I'd have to beat them girls off me down at the Piggly Wiggly!"
